

Responsible Disclosure Report

Dangling Cloud Storage Reference — Potential Bucket Takeover (Backblaze B2)

Date of Report	2026-07-08
Reported To	Backblaze Security Team (security@backblaze.com)
Affected Provider	Backblaze B2 Cloud Storage
Affected Reference	https://f001.backblazeb2.com/file/EricZimmermanTools/ShellBagsExplorerer.zip
Vulnerability Class	Dangling Reference / Potential Bucket Takeover (CWE-706 related; OWASP: Improper Resource Shutdown or Release)
Severity (Reporter Assessment)	Medium–High (context-dependent; supply-chain risk)
Status	Unverified — name availability observed, claim NOT completed

1. Summary

While attempting to access a publicly referenced Backblaze B2 file URL associated with the well-known digital forensics toolset "Eric Zimmerman Tools," the endpoint returned an HTTP 404 response indicating that the underlying bucket no longer exists. Historical links, documentation, or automated download scripts that still reference this bucket name may therefore be pointing to a namespace that is currently unclaimed and could potentially be re-registered by an unrelated third party.

2. Evidence Observed

- Requesting the URL below returns a JSON error response rather than the expected file:

```
GET
https://f001.backblazeb2.com/file/EricZimmermanTools/ShellBagsExplorerer.zip
{
  "code": "not_found",
  "message": "Bucket with such name does not exist.",
  "status": 404
}
```

- During a controlled, non-completed test of the bucket-creation flow on the Backblaze B2 console, entering the exact bucket name "EricZimmermanTools" did not trigger a name-conflict error. The flow only stopped the process at the payment/billing-details step, which was intentionally left incomplete. This suggests the name-availability check does not currently reject this specific name, which is consistent with the bucket being unclaimed.

Note: No bucket was actually created, no payment method was submitted, and no content was uploaded. This report is based solely on observing the error responses described above.

3. Potential Impact

- If this bucket name is re-registered by an unauthorized party, any third-party website, article, forensic-tooling documentation, or automated script that still references the original URL could be silently redirected to attacker-controlled content.
- Because the original bucket was used to distribute a security/forensics tool (ShellBagsExplorer, part of the Eric Zimmerman Tools suite used widely by DFIR practitioners and law enforcement), a malicious re-registration could be leveraged to distribute a trojanized binary under a trusted name — a supply-chain risk to a security-sensitive user base.

4. Steps to Reproduce

1. Send an HTTP GET request to the affected URL and observe the 404 / "Bucket with such name does not exist" response.
2. (Optional, for the provider's internal verification only) Attempt to create a new bucket using the exact name in a test account and observe whether a name-conflict error is raised before the billing step.

5. Recommendation

- Verify server-side whether the bucket name "EricZimmermanTools" is currently available for registration by any Backblaze account.

- If available, consider a cooling-off / reservation period for recently-deleted bucket names before they can be re-claimed by a different account, particularly for names with a history of public traffic.
- Notify or coordinate with the original account owner (publisher of Eric Zimmerman Tools) if this bucket deletion was unintentional or if legacy links should be redirected/deprecated formally.
- Consider general guidance/documentation for customers on safely decommissioning buckets that have public inbound links (DNS/CNAME and direct URL patterns) to prevent dangling-reference takeover across the platform.

6. Reporter Notes

This report is submitted in good faith under responsible disclosure practice. The reporter has not completed the bucket registration, has not uploaded any content, and has not taken any action beyond observing the platform's own error responses. The reporter is available to provide further detail or to assist with verification if needed.

Appendix: Screenshots:

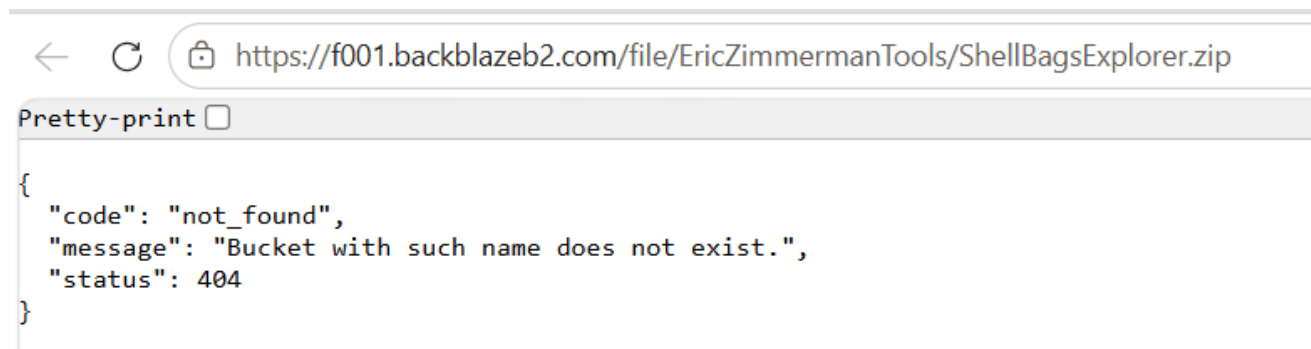

Figure 1 — HTTP response confirming the bucket "EricZimmermanTools" does not exist (404 Not Found).

A bucket is a container that holds files that are uploaded into B2 Cloud Storage. The bucket name must be globally unique and must have a minimum of 6 characters. A limit of 100 buckets may be created per account. An unlimited number of files may be uploaded into a bucket.

Bucket Unique Name:

Files in Bucket are:

☐ Private

☒ Public

A payment history is required, or pay a one-time fee (\$1.00 + appl. taxes) that is credited to your account. [Learn more.](#)

Figure 2 — Bucket-creation form: entering the exact name "EricZimmermanTools" is accepted with no name-conflict error.

Create a Bucket

Your card number is incomplete.

Zip / Postal Code

Order:

\$1.00

Default Encryption:

☒ Disable

☐ Enable

Backblaze B2 key (SSE-B2), an encryption key that Backblaze creates, manages and uses for you.

Object Lock:

☒ Disable

☐ Enable

A security feature that can provide data immutability by restricting a file from being modified or deleted for a specified period of time. [Learn more.](#)
